

Tutorial 2 exercise

1. Implement a student class with the following attributes

- a. Name
- b. ID
- c. Array of scores for the modules

Implement the following methods:

Getters method for the name and ID

A getGPA() methods to compute and return the GPA of the students based on the array of scores.

Grade	Value	Score range
A	4	85 to 100
B	3	75 to 85 (not inclusive)
C	2	65 to 75 (not inclusive)
D	1	50 to 65 (not inclusive)
F	0	Less than 50

2. Implement a Counter class with

- a. a static int count variable.
- b. a int id for that object

Each time a Counter object is created, the constructor will increment the count and assign to the object id.

Implement an instant method to display the object ID and a static method to display how many objects have been created.

3. Implement the 3 classes Car, Engine and Wheel.

A Car is made up of an Engine and Wheels.
